

HOW TO KEEP YOUR CAR COOL IN THE HOT SUMMER MONTHS

On a day that is 80°F, the temperature in a vehicle can reach over 120°F. Not only are these temperatures harmful to the vehicle's body, they can provide unnecessary wear and tear on a vehicle. Fortunately, with the proper precautions there are many ways to keep a car cool in the summer sun.

Park in the Shade

Too obvious? I know that's what you're thinking! But, how many times have you stopped for just "a second" and grab the nearest parking spot, within moments your car becomes a sauna. When possible park in the shade.

Sunshades

I know they don't look the best but they really work. By purchasing a windshield sunshade that you place on the inside of your windshield you limit the heat inside your car.

Steering Wheel Covers

Steering wheel covers, particularly cloth ones, will allow you to comfortably handle your steering wheel after your vehicle has been sitting in the sun. Steering wheels can get extremely hot, too hot to touch making for an unsafe grip on the wheel.

Items You Should Not Leave in Your Car

- Anything packaged under pressure (like hair spray or pop)
- Tapes, CDs, or DVDs
- Crayons, candy, chocolate, gum, lipstick.
- Credit cards or any card with a magnetic strip

Tip of the Month...

When your car has been parked in the sun, be particularly cautious of seat belt buckles and car seats. They can often be hot enough to cause serious burns. AND Check your fluids regularly. The last thing you want is for your car to overheat. Have your automobile serviced regularly during the hot months.

check & clean condenser of debris

All for only \$59.99

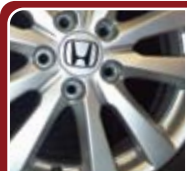

*this is a preventative maintenance not a repair

Happy 7th Birthday
to our Hailey!

It's important to keep your antifreeze topped up even during the summer, it not only has a low freezing point but a high boiling point, too. This keeps your vehicle from overheating. Have a wonderful summer and Happy Canada Day!
