

# YOU MIGHT BE READY FOR THE SUMMER... ...BUT IS YOUR VEHICLE?

Getting Your Vehicle Ready for  
The Summer Months Ahead!

**Air conditioning** - You want to make sure that the air conditioner is actually working. If the air coming from the vent is not cool, have it checked by a qualified technician.

**Battery** - It is a good idea to have your battery tested every six months.

**Brakes** - The only thing worse than a car that won't go, it's a car that won't stop. Your owner's manual will tell you how often your brakes should be inspected. Staying with the maintenance schedule will help keep you and your family safe.

**Cooling System** - The cooling system is what keeps your engine at the right operating temperature. Have your cooling system flushed and refilled, as per the manufacturer's recommendations, to extend the life of your vehicle and prevent major mechanical failure.

**Oil Changes** - Regular oil changes not only help to reduce wear and tear on your engine, they also keep your engine performing at its peak.

**Tires** - Not only should you pay attention to your tread wear, but also your tire pressure. Under/over inflated tires will not only affect the way your vehicle handles but your gas mileage as well.

**Transmission** - With regular service not only will your transmission last longer, you also get a smoother ride.

**Windshield Wipers** - It's a good idea to check your windshield wipers every 60 to 90 days for wear and tear. While you're here you may want to top up your windshield washer fluid too.

Summertime is a time for family and travel. By taking the time now to have your vehicle thoroughly serviced you will travel with more confidence. It's easier and cheaper to fix a small problem than wait until it becomes larger so grab this checklist and stop by today. Enjoy your summer! [Yahoo.com](http://Yahoo.com)
