

Studded vs Friction WINTER TIRES

Your choice of studded or friction winter tires depends on your needs. Both options are wear resistant and have superb driving qualities. By knowing their special characteristics you can choose the type of tire that best matches your needs.

Did you know?
Winter temperatures are hard on your battery, to make sure you don't get left out in the cold we perform a FREE battery test with every appointment.

The Locket

The brave soldier in his pressed uniform, saying his goodbyes on the noisy train platform.

The whistle sounded he clambered on, and there she stood waving tearfully, his mom.

He almost cried as she blew him a kiss, right then and there he knew he wasn't ready for this.

He couldn't go back he had enlisted, the trains engine started the smokestack misted.

He leaned his head on the seat closed his heavy eyes, he didn't awaken 'til the following sunrise.

He unpacked his bag pulled out his wool socks, there in the midst was a small white box.

He untied the ribbon stuffed it in his pocket, opened the box, inside was a locket.

He wore it when he fought and when he was apart, from his strong steady troops pressed it close to his heart.

And when the war ended he came home a wreck, the waited arrival the locket round his neck.

The brave soldier, in his dirty uniform, saying his hellos, on the noisy train platform

Tip of the Month

Car batteries can be measured in 2 different ways.

The cranking amp (CA) and the cold cranking amp (CCA).

The cranking amp rating is for when a battery is warm, the CAA is for colder temps. Here in Carleton County we tend to look for the CAA number which should be between 500-700 CAA. So when you are shopping for a new car battery keep an eye on the CAA number.

I would encourage you to find a remembrance day service near you. Take a moment and reflect on all we've been given.
